01 Welcome to Averroes Code

What it is and who it is for

Averroes Code is a complete coding studio that runs entirely on your computer. Write, run and share code in C, C++, Python, Java, JavaScript, TypeScript, HTML and CSS. Learn with video courses, practise with unlimited problems and compete in live contests. You never need an internet connection or an account.

Write & run

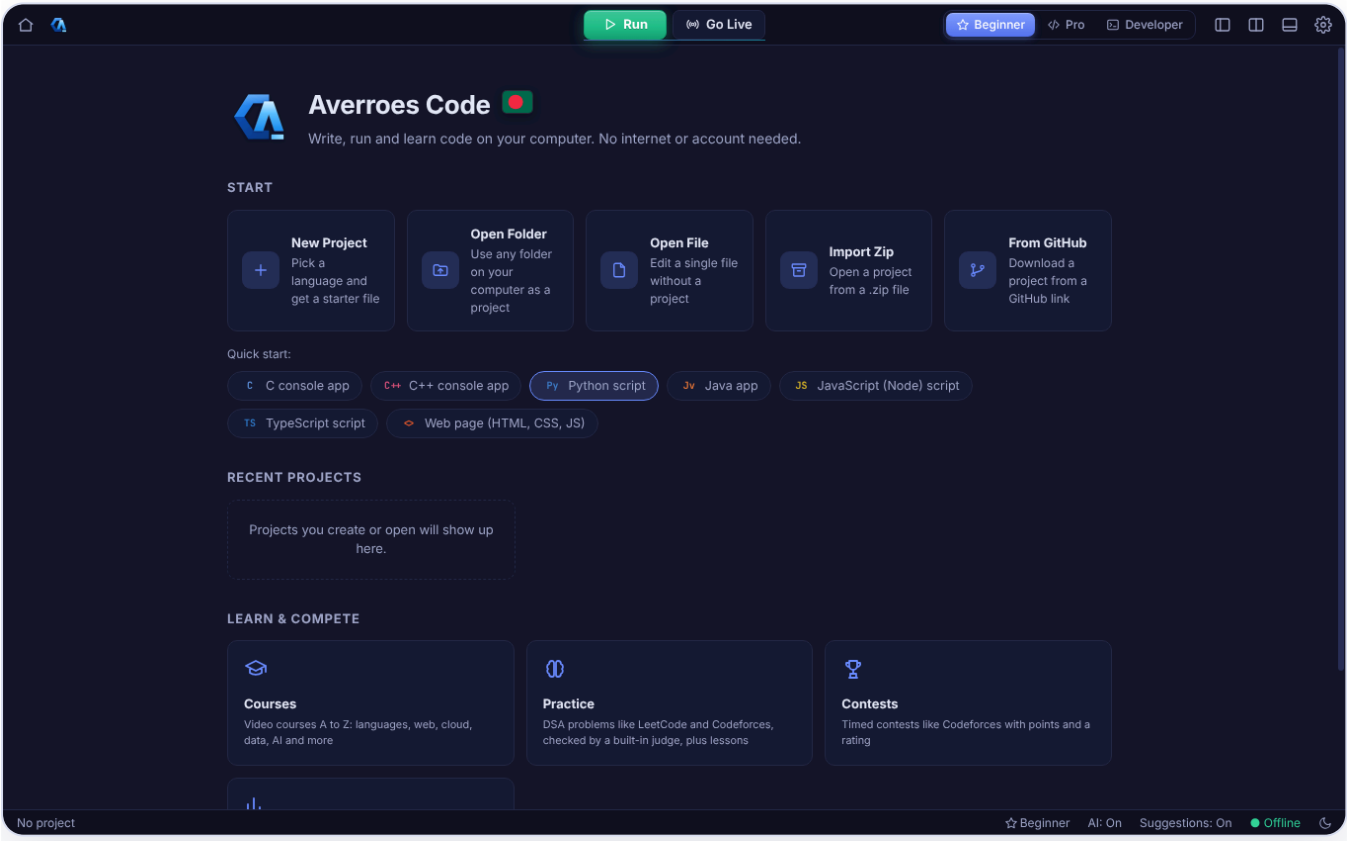

A professional editor (the same engine as VS Code) with one-click Run, an input box, clear error messages and a live web preview.

Learn

23 video courses from A to Z. Each lesson has an animated video, code you can run, notes, a quiz and a practice exercise.

Grow

Unlimited practice, live contests with standings and tournaments, plus certificates and awards you can share on LinkedIn.

The home screen. Start a project, open a folder or pick up where you left off.

Note Everything works offline. Only a few optional features use the internet, and only when you ask: the online AI helper, pushing to GitHub and opening share links.

02 Install and first start

Windows, Linux and macOS

Download

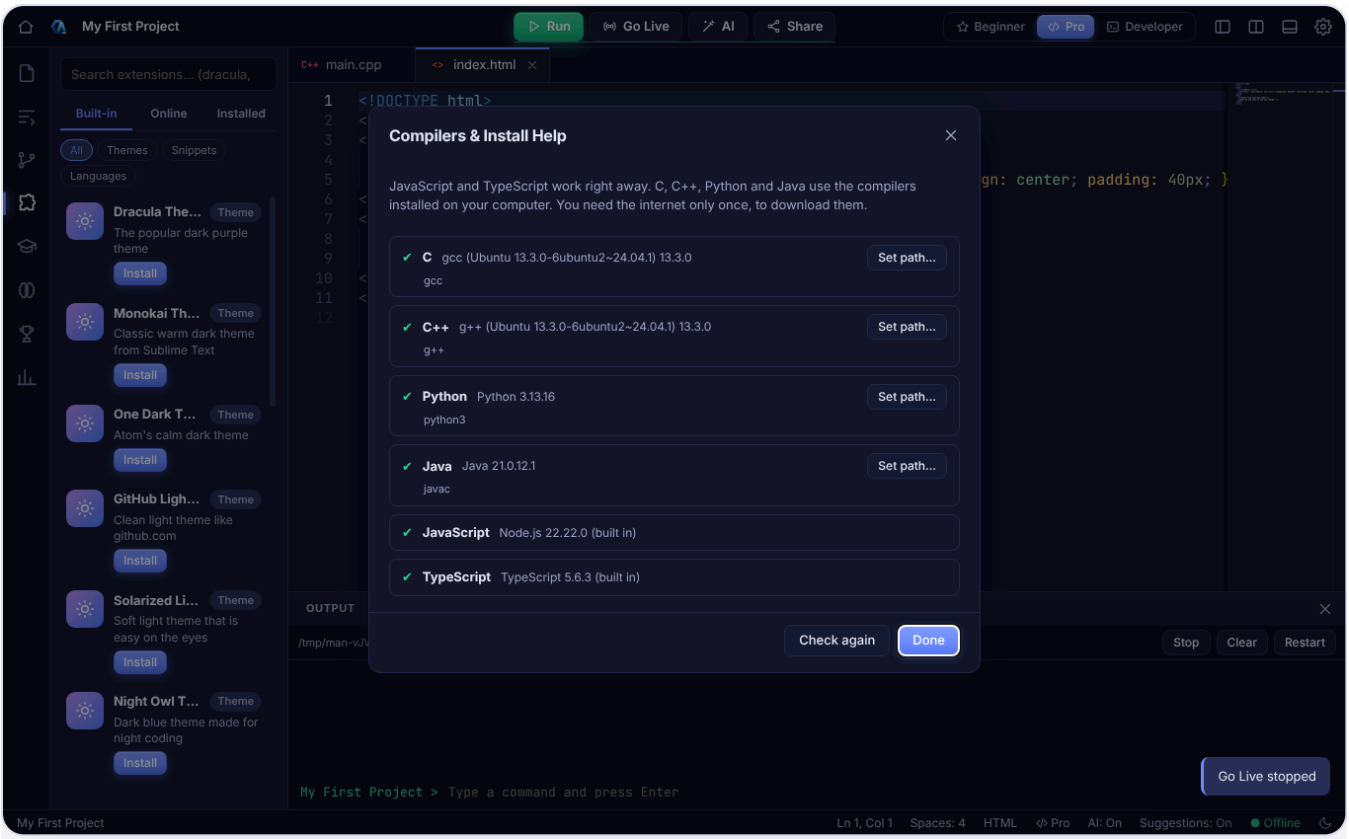

Open **https://uowyeasin-cyber.github.io/averroes-code/** on your computer, or scan the QR code on that page with your phone. Pick the installer for your system.

System	File	How to install
Windows 10/11	Averroes-Code-Setup-0.4.3.exe	Double-click it and follow the steps. The portable version, Averroes-Code-0.4.3-portable.exe, runs without installing.
Linux	Averroes-Code-0.4.3-linux-x86_64.AppImage	Right-click → Properties → Permissions → *Allow executing*, then double-click it.
macOS	Averroes-Code-0.4.3-mac-AppleSilicon.zip or -mac-Intel.zip	Unzip it and drag *Averroes Code* into Applications. The first time, right-click it and choose **Open**. On macOS 15, open System Settings → Privacy & Security and click **Open Anyway**.

Important Windows may show “Windows protected your PC” because the app is new. Click **More info**, then **Run anyway**.

Compilers

JavaScript and TypeScript work straight away. For C, C++, Python and Java, Averroes Code finds the compilers already on your computer. Open **Tools → Compilers & Install Help** to see what was found. It shows one-click install help for anything that is missing.

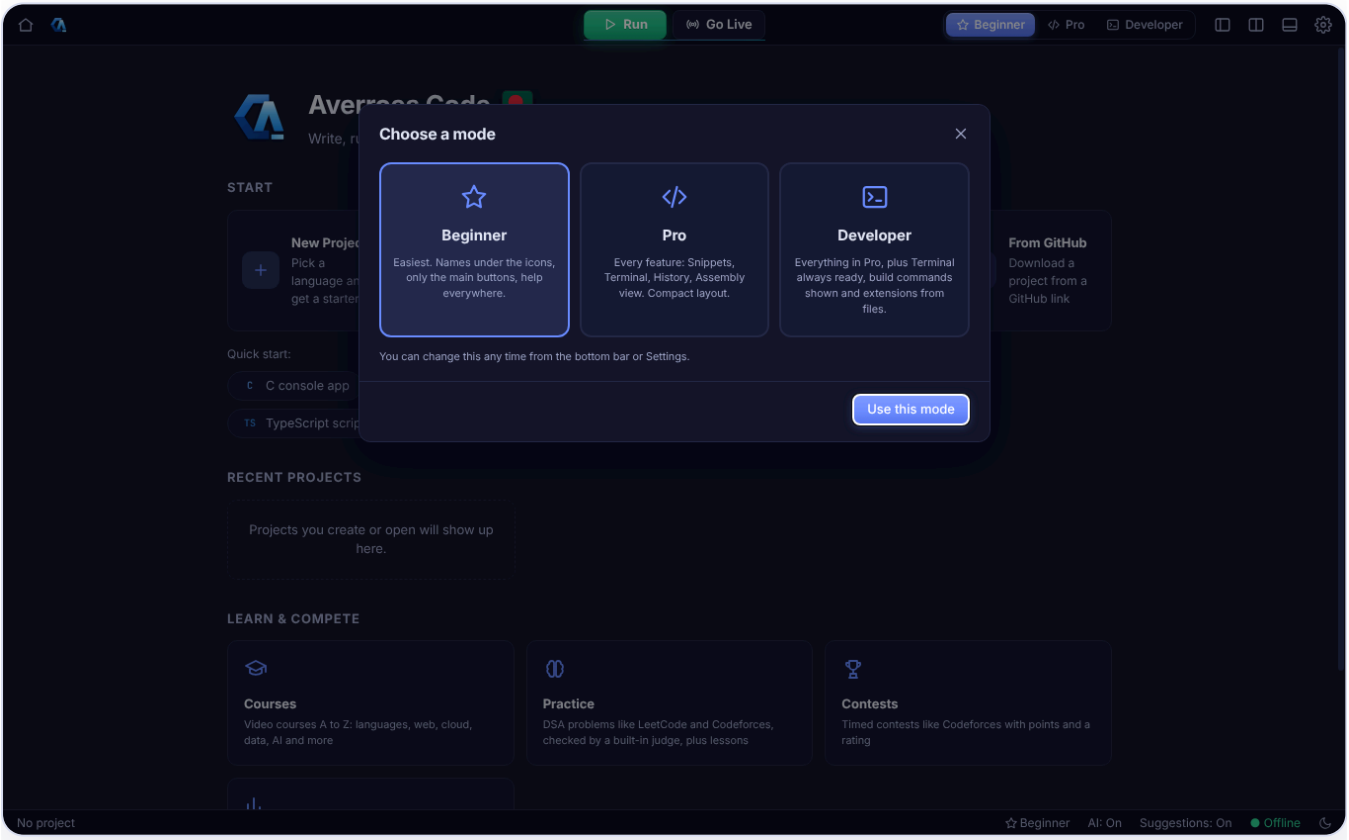

Compilers & Install Help shows each language, its version, and how to install a missing one.

03 Choose your mode

Beginner, Pro or Developer, and switch at any time

Averroes Code adapts to you. The mode switch at the top right changes the layout instantly, and nothing is lost when you switch.

Mode	Best for	What you see
Beginner	New programmers and students	A calm screen, big Run button, friendly error help and guided learning.
Pro	Everyday coding	Split editors, Assembly/Bytecode views, snippets and the full toolbar.
Developer	Power users	A terminal that opens with your project, git tools and every panel.

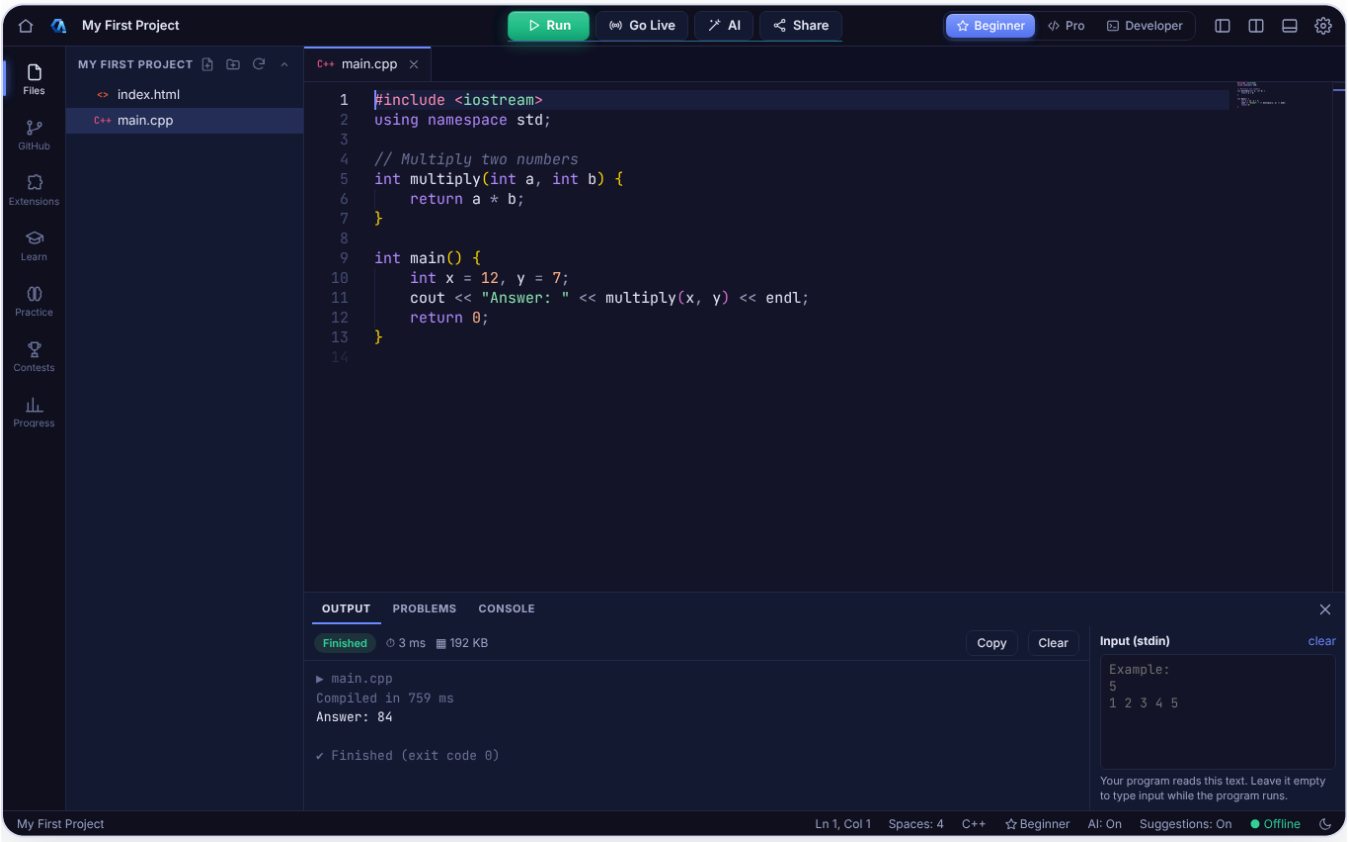

Pick a mode on first start, then change it any time from the top bar or the status bar.

04 Projects and the editor

Files, tabs, suggestions and themes

1. Click **New Project** on the home screen and choose a language and a name, or click **Open Folder** to use an existing folder.
2. Files appear in the **Explorer** on the left. Right-click a file to rename, delete or **▶ Run this file**.
3. Type your code. Suggestions appear as you type (turn them off in Settings). Press `Ctrl` + `S` to save.

Use **View → Split Editor** (`Ctrl` + `\\`) to see two files side by side. Choose **Averroes Midnight** (dark) or **Averroes Light** in Settings, or let it follow your system.

Running a C++ program. Output appears in the panel below, with input in the box on the right.

05 Run and compile

One click for every language

1. Open the file you want to run.
2. If the program reads input, type it in the **Input** box first (one value per line).
3. Press **Run** or `F5`. Press `Shift` + `F5` to stop.

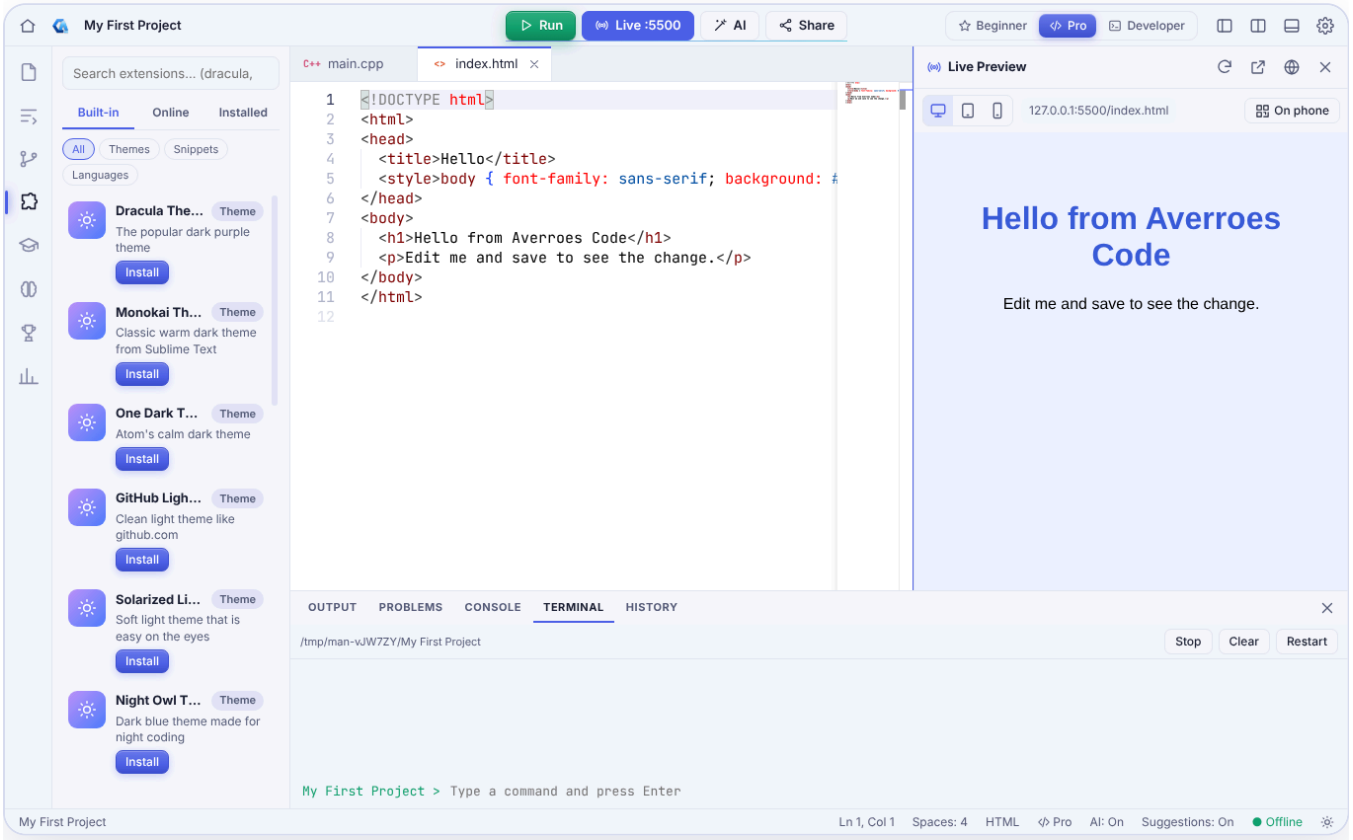

Averroes Code compiles when needed, shows the time taken, and turns compiler errors into a clear list in the **Problems** tab. Click a problem to jump to the line.

> **Tip** In Pro mode, **Show Assembly** (`Ctrl` + `Alt` + `A`) shows the machine code for C/C++, **Show Bytecode** does the same for Java, and TypeScript can be shown as JavaScript.

06 Live web preview

See HTML and CSS change as you save

Open an HTML file and click **Go Live** (`Alt` + `L`). The page opens in a preview next to your code and reloads every time you save. A QR code lets you open the same page on a phone connected to the same Wi-Fi.

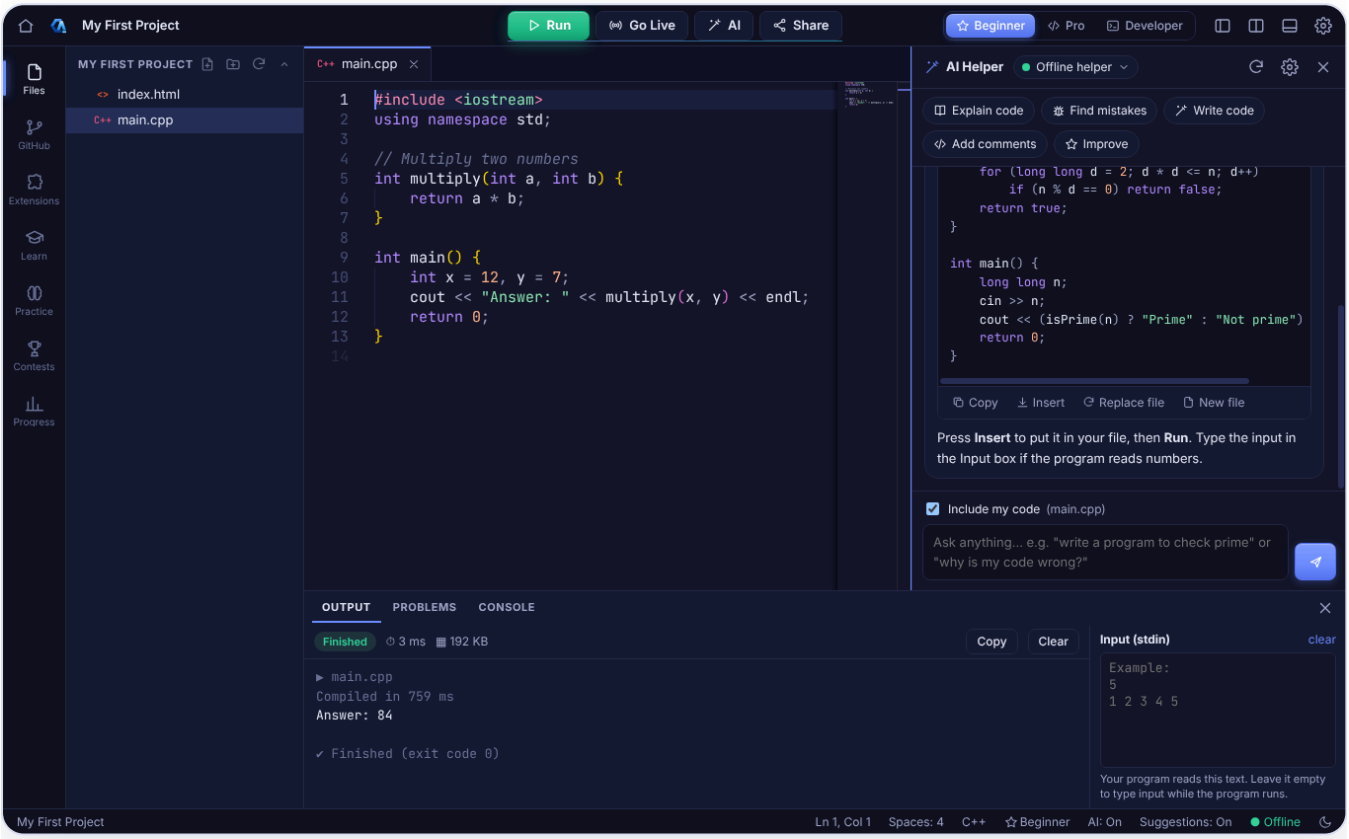

Go Live with the light theme: code on the left, the page on the right.

07 AI helper

Explain, fix and write code, online or offline

Open the AI helper with `Ctrl` + `I`. Ask it to explain code, find a bug or write a function. The **offline** helper runs on your computer and needs no internet. To use an online model, add your own API key in the AI settings. The key is stored encrypted on your computer and never leaves it except to talk to that provider.

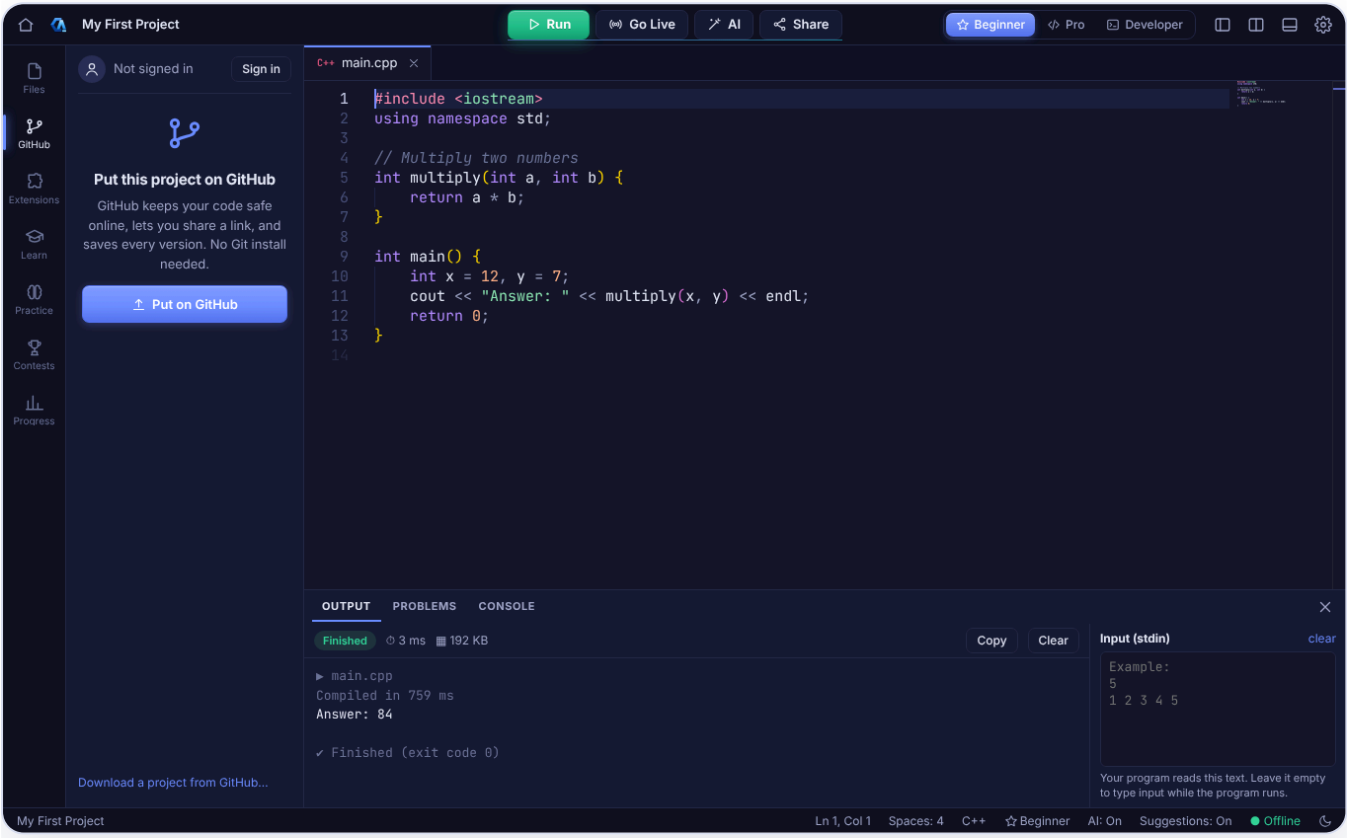

Ask in plain words. Insert the answer into your file with one click.

08 GitHub, share and extensions

Push your work and send it anywhere

Push to GitHub

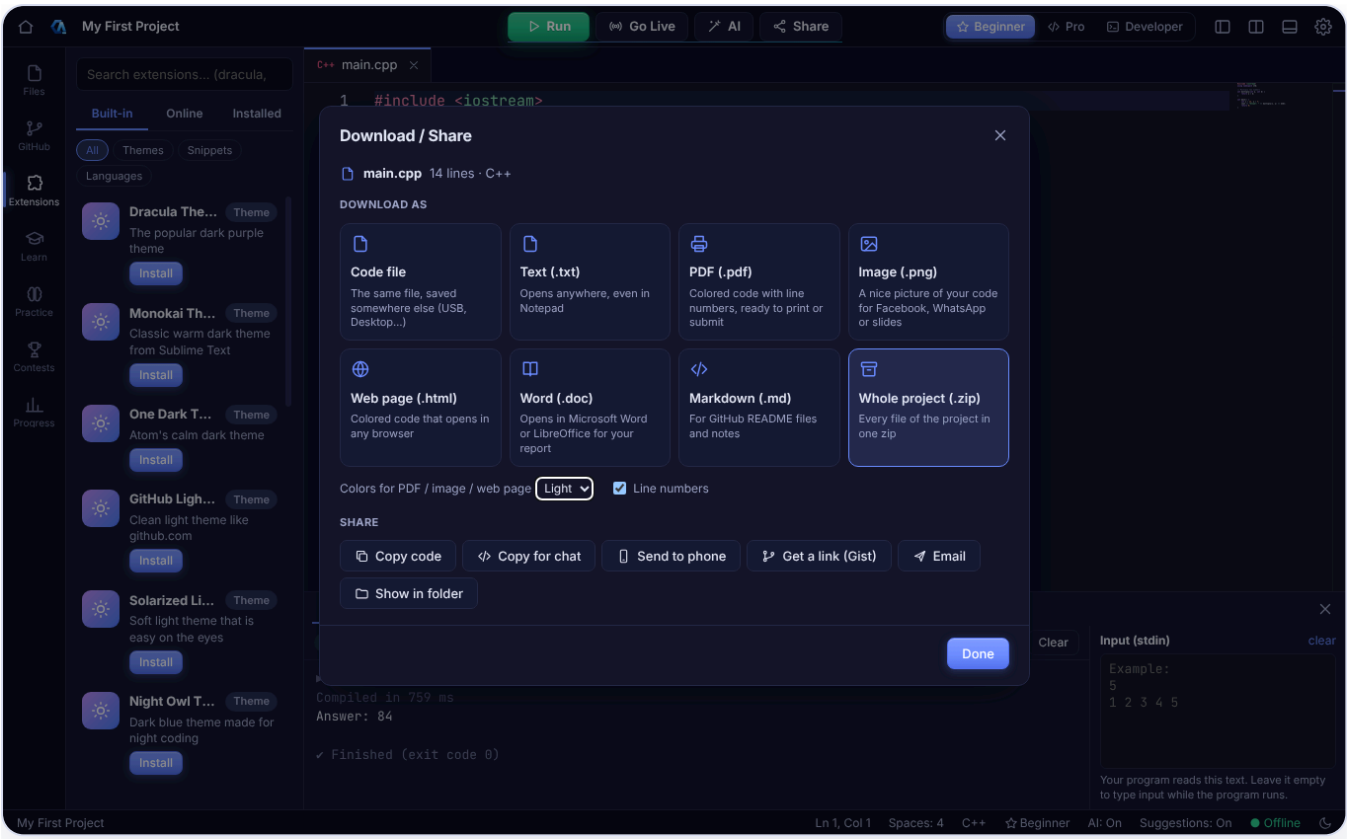

Open the GitHub panel (`Ctrl` + `Shift` + `G`), sign in once, and click **Push to GitHub**. Averroes Code creates the repository and uploads your project.

The GitHub panel: one button to publish a project.

Download and share

File → Download / Share (`Ctrl` + `Shift` + `E`) saves your code as a file, PDF, image, Word document, Markdown, a web page or a whole-project zip. You can also copy it, send it to your phone or share it by email.

Many formats in one place.

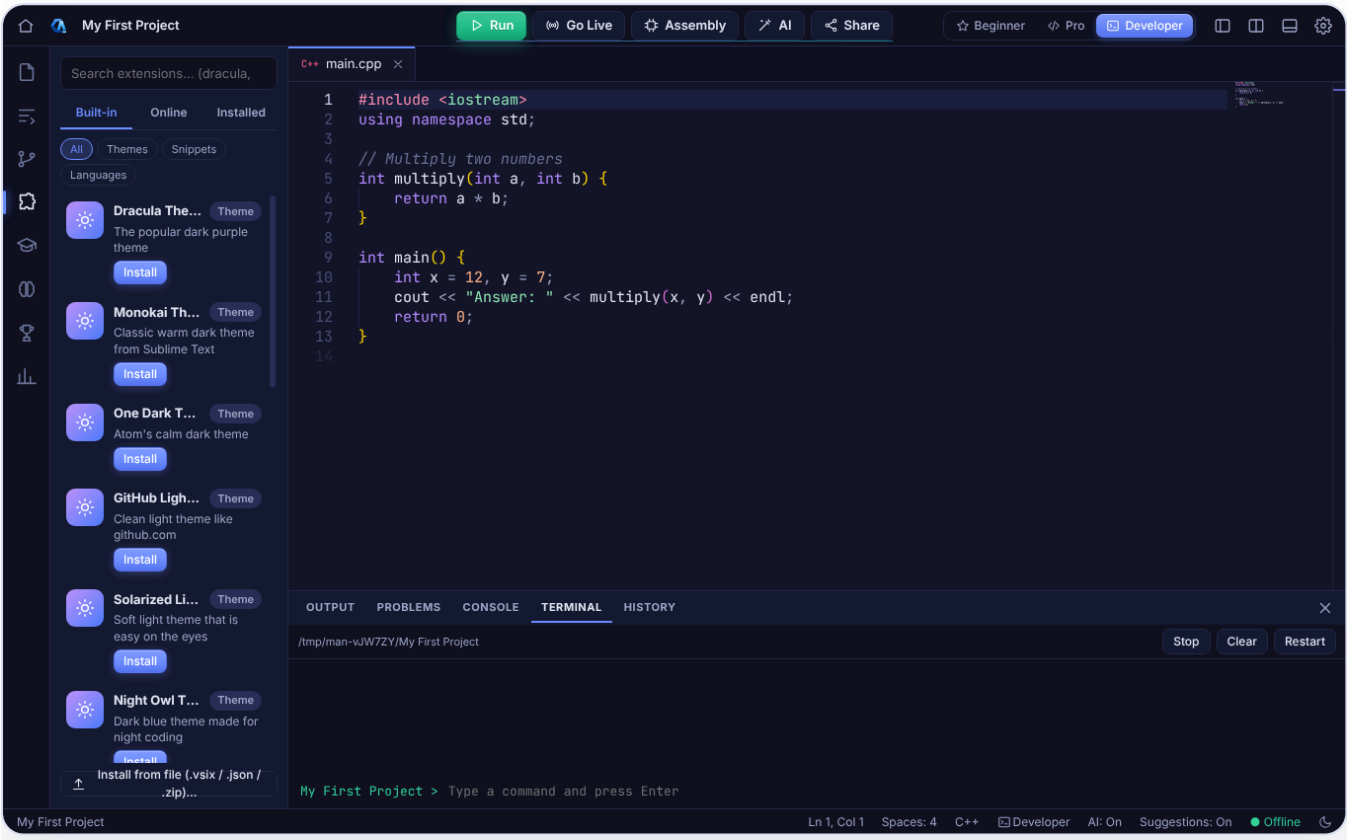

Extensions

Add themes, snippets and language helpers from the built-in Extensions view. They are installed locally.

09 Developer tools

Terminal, snippets and more

In Developer mode the terminal (`Ctrl` + `` ` ``) opens in your project folder. Run git, package managers or your own scripts there. **Tools → Snippets Library** (`Ctrl` + `Alt` + `S`) keeps ready-made code for common tasks.

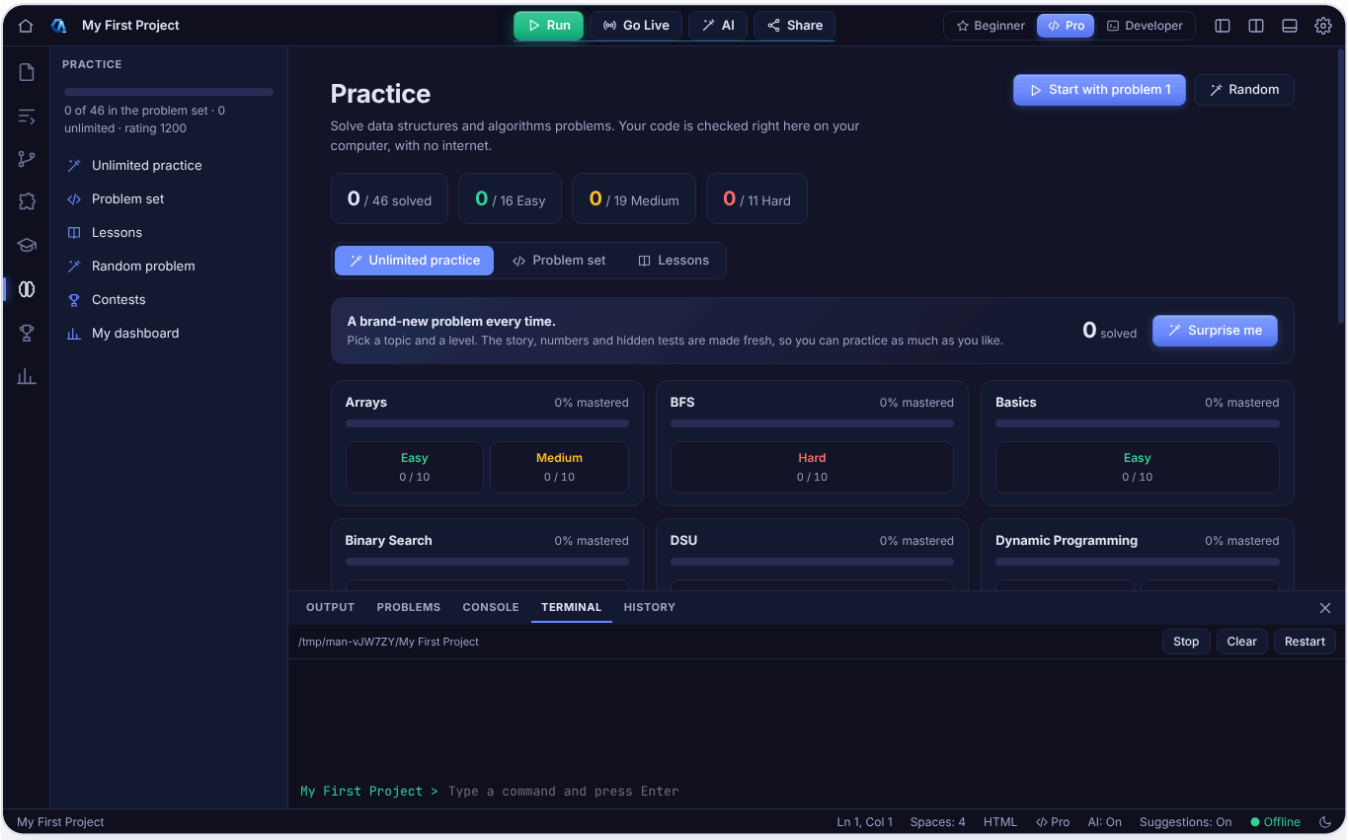

Developer mode with the integrated terminal.

10 Unlimited practice

Fresh problems, by topic, forever

Open **Practice** (`Ctrl` + `Shift` + `P`). Choose a topic and a level (Easy, Medium or Hard). Each time you ask, Averroes Code creates a **brand-new problem** with its own tests, so you never run out. Solve 10 at a level to earn a ★ for that topic.

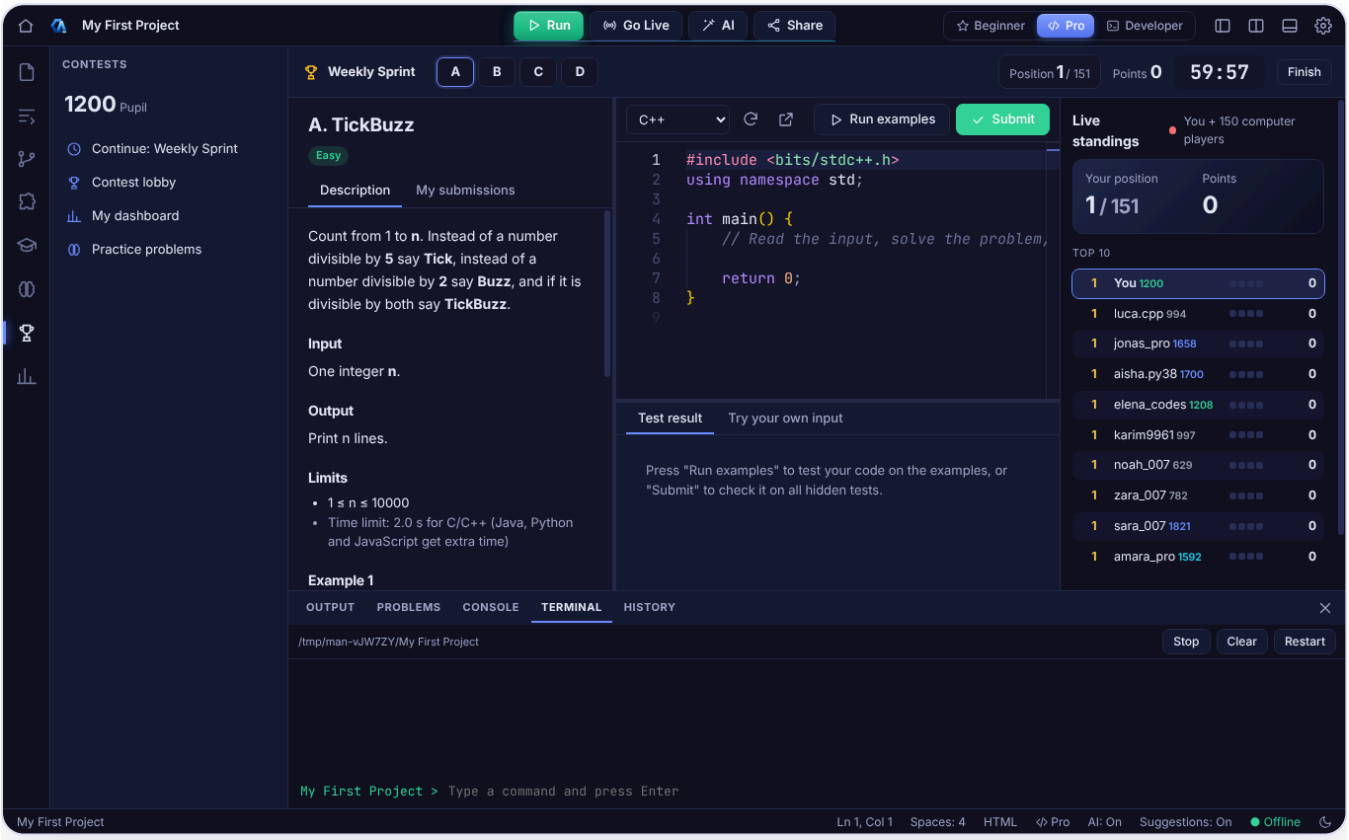

Topic cards show your progress at each level. “Surprise me” picks a random topic.

1. Read the problem and the examples.
2. Write your solution in any language and click **Run examples**.
3. Click **Submit**. The judge runs every hidden test and shows the verdict: Accepted, Wrong Answer, Time Limit or Compile Error.

11 Live contests and tournaments

Compete against the clock and a live field

Start a contest from **Contests**. Problems are created fresh for every contest. While it runs, the **live standings** show your score, your position and the top 10, updating every few seconds as other contestants solve problems.

A contest in progress: problems, timer, your position and the live top-10 board.

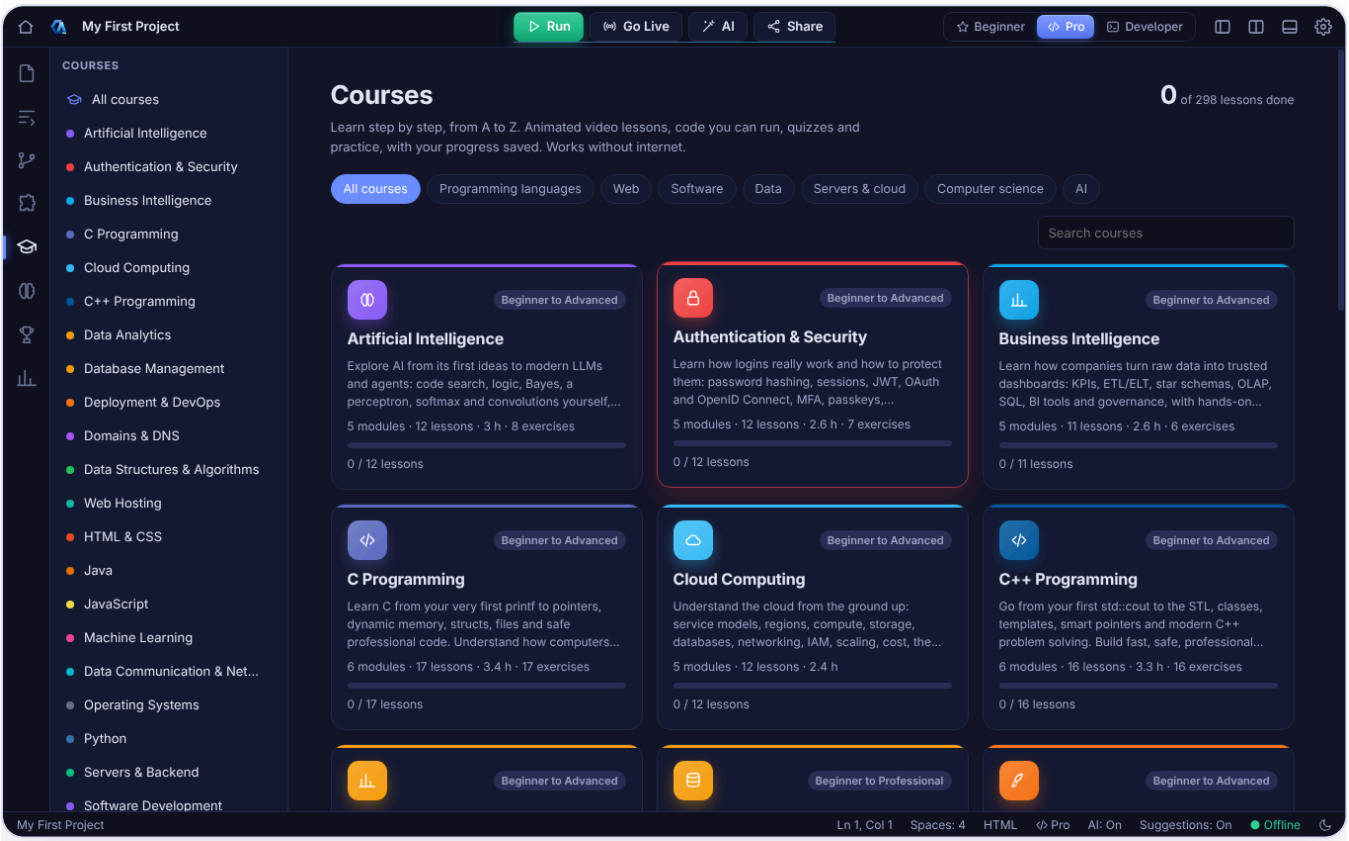

Tournaments join several rounds together, from Qualifier to Final. Finish high enough in a round to go through to the next one.

> **Note** The other contestants are computer players matched to your rating, so contests work fully offline.

12 Video courses

Learn A to Z with animated lessons

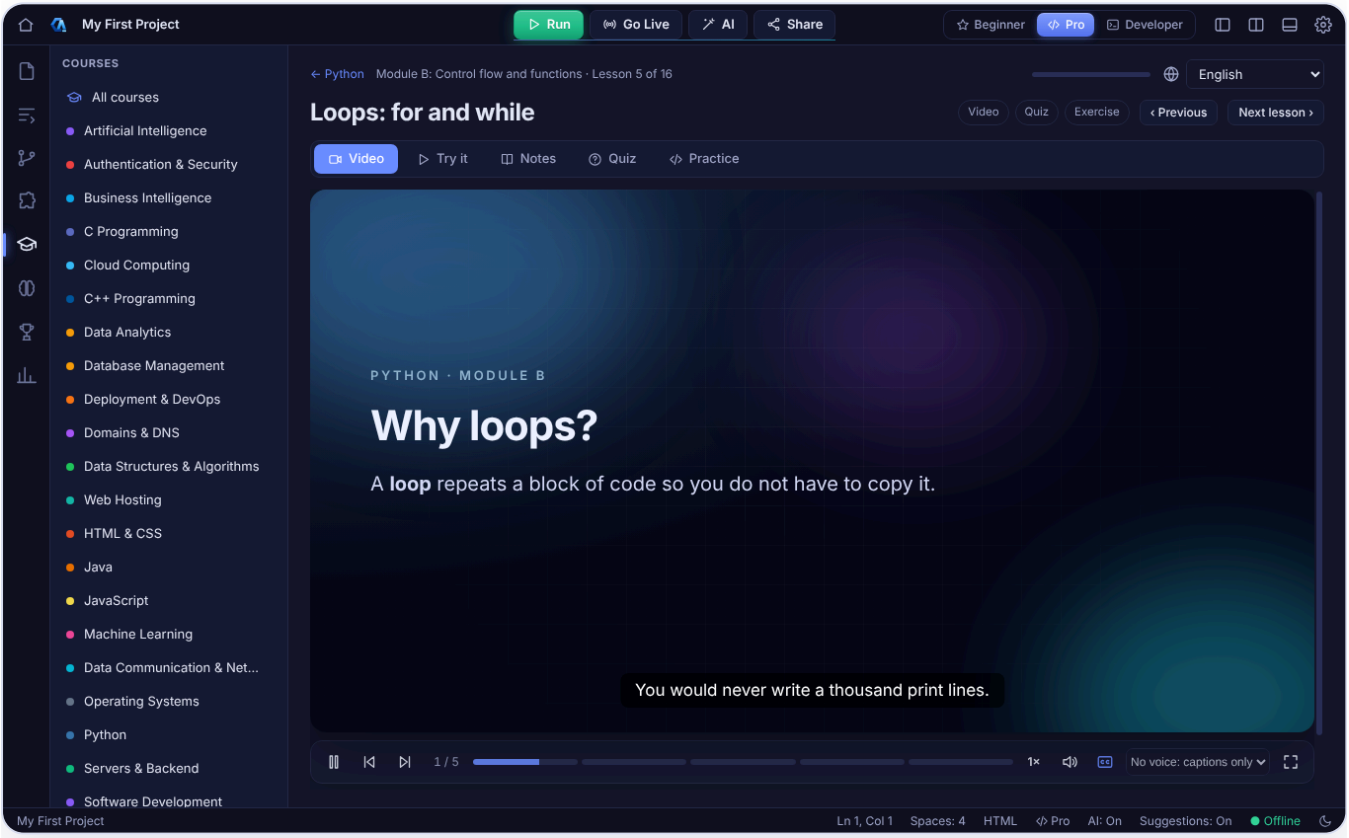

Open **Learn** (`Ctrl` + `Shift` + `L`). There are 23 courses: C, C++, Python, Java, JavaScript, TypeScript, HTML & CSS, Web Development, Software Development, Databases, Servers, Authentication & Security, Cloud, Deployment, Domains & DNS, Web Hosting, Operating Systems, Networking, Data Structures & Algorithms, Machine Learning, Data Analytics, AI and Business Intelligence.

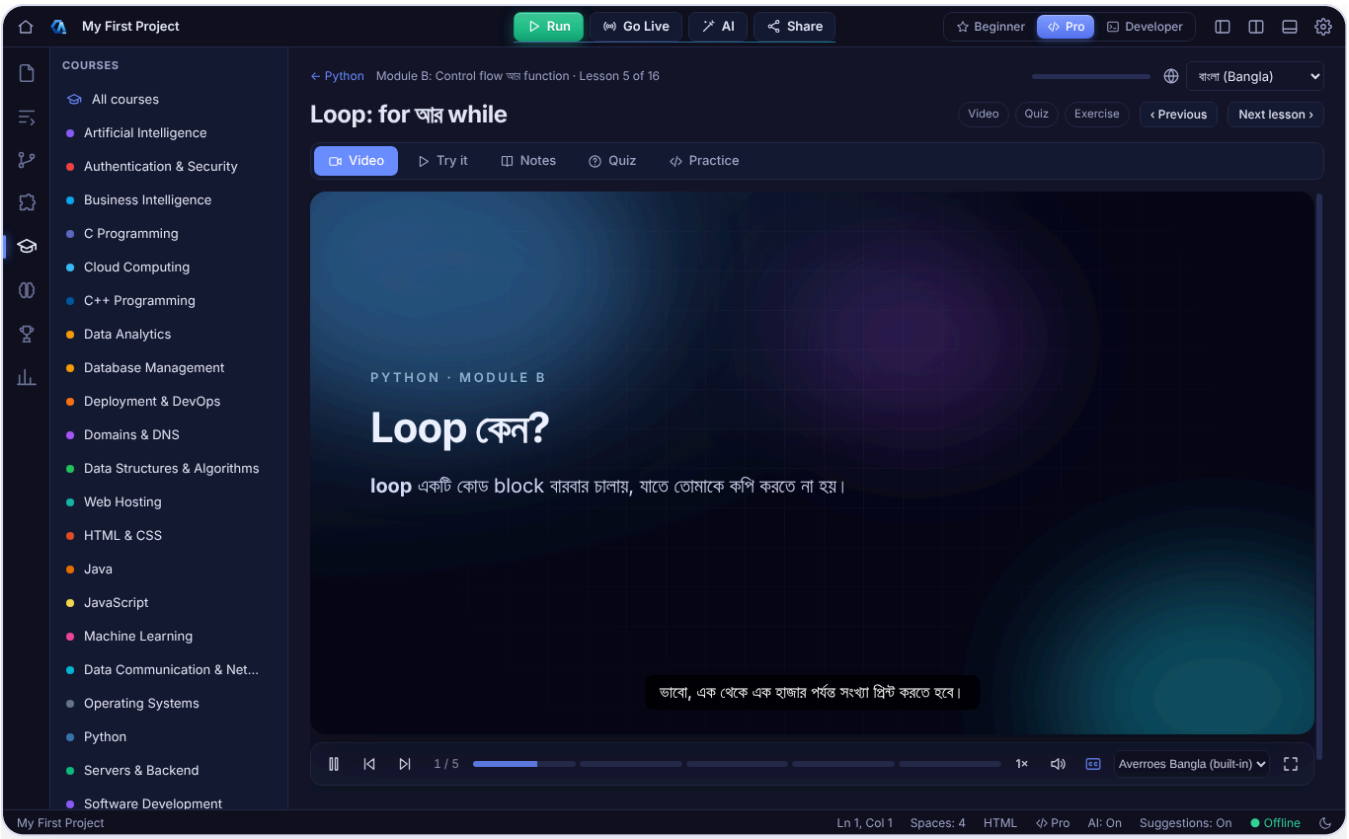

The course catalog. Filter by category or search. Progress is saved automatically.

Every lesson has six parts

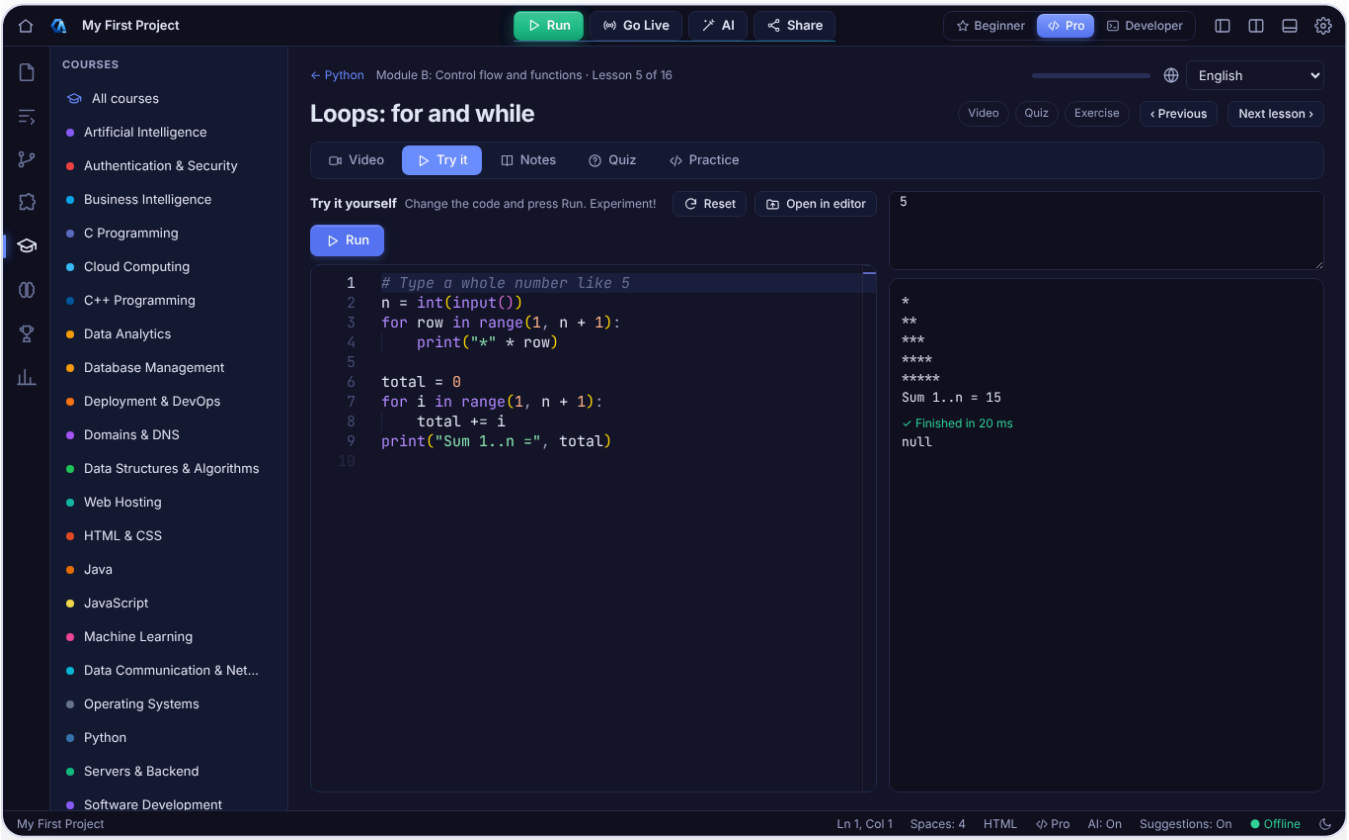

Tab	What it does
Video	An animated lesson with a narrator, captions and code that types itself. Change speed, voice and language (English or বাংলা). Bangla lessons use the app's own built-in Bangla voice, offline.
Try it	Edit and run the example right inside the lesson.
Notes	A clear written summary to read and review.
Quiz	Three questions. Get two right to pass.
Practice	A coding exercise checked by the judge.
Task	A hands-on task for topics without code.

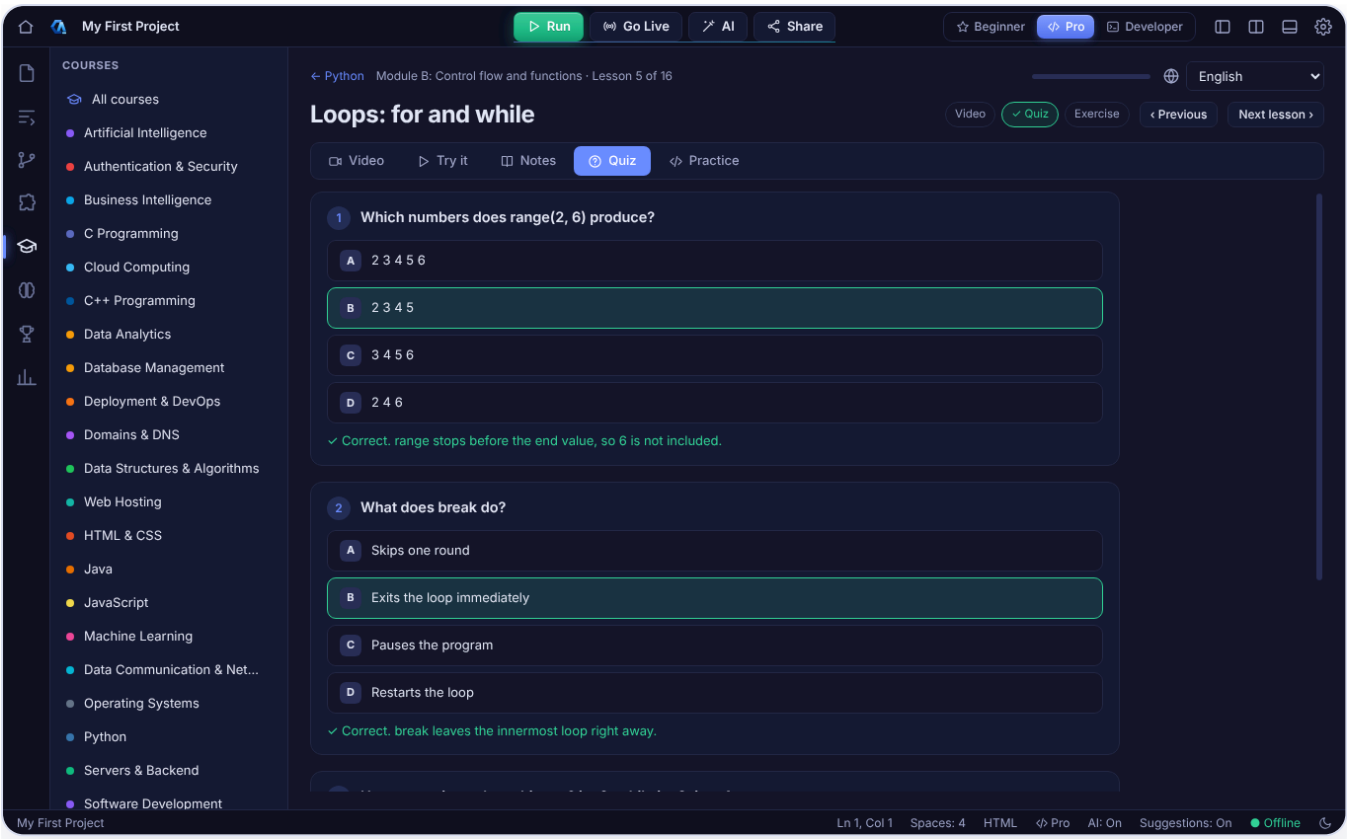

The animated video player with captions and playback controls.

The same lesson in Bangla. Pick the language with the globe menu.

Try it: change the code, type input and press Run.

The quiz explains every answer.

13 Certificates and awards

Proof of your progress, ready to share

Averroes Code rewards you as you learn:

Credential	When you get it
Bronze, Silver, Gold and Diamond awards	At 25%, 50%, 75% and 100% of a course. Each award is a 3D medal shaped for its topic (for example a C++ hexagon), with the Averroes Code logo.
Module certificate	When you finish every lesson in a module (topic).
Graduate certificate	When you finish the whole course.

The course page shows your awards and a certificate button on each finished module.

A Graduate Certificate, signed and with a unique certificate ID.

Share it

1. Open the award or certificate and check your name (click **Change name** to fix it).
2. Click **Image (.png)** or **PDF** to save it.
3. Click **Add to LinkedIn** to add it to *Licenses & certifications* on your profile, or share on Facebook or X. Attach the saved image to your post.

> **Note** Certificates are issued by the app on your computer. Each has a unique ID made from your name, the course and the date.

14 Keyboard shortcuts

Work faster

Action	Shortcut
Run	F5
Stop	Shift + F5
Save	Ctrl + S
New file	Ctrl + N
New project	Ctrl + Shift + N
Open folder	Ctrl + O
Find / Replace	Ctrl + F
Go to line	Ctrl + G
Toggle comment	Ctrl + /
Show suggestions	Ctrl + Space
Split editor	Ctrl + \\
Toggle sidebar	Ctrl + B
Toggle bottom panel	Ctrl + J
Terminal	Ctrl + `
Go Live	Alt + L
AI helper	Ctrl + I
GitHub panel	Ctrl + Shift + G
Download / Share	Ctrl + Shift + E
Practice	Ctrl + Shift + P
Courses	Ctrl + Shift + L
Dashboard	Ctrl + Shift + D
Settings	Ctrl + ,
All shortcuts	Ctrl + K

On a Mac, use ⌘ instead of Ctrl.

15 Help and troubleshooting

Quick answers

Run says a compiler is missing.

Open Tools → Compilers & Install Help and follow the steps for that language, then click Check again.

My program waits forever.

It is waiting for input. Type the values in the Input box and run again.

I can’t hear the lesson voice in Bangla.

Averroes Code has its own built-in Bangla voice, so you don’t need to install one. In the lesson player, open the voice menu and choose **Averroes Bangla (built-in)**, and check that the speaker button is not muted.

Where are my files?

In Documents → Averroes Projects. Practice solutions and course examples are kept there too.

How do I reset course progress?

Open the course and click Reset progress. Earned certificates are kept.

Happy coding.
